INTRODUCTION

Letter from the Founder

I don't want to run an agency. I want to keep building software myself, with someone I trust reviewing every line — that's the whole reason Zenstack Solutions stays a two-person team.

Zenstack Solutions grew out of freelance client work — HR platforms, healthcare booking systems, and messaging tools for small businesses that needed real software, not a template. The pattern that kept showing up: businesses were paying agency prices for junior-level execution and slow replies.

So we kept the team deliberately small. Sumit Saini joined to cover the PHP, Laravel, and Django side of the stack, so between the two of us we can take on most web, mobile, and SaaS builds without subcontracting to people you've never met. This profile walks through how we work, what we've shipped, and what it looks like to work with us.

Anuj Bishnoi

Founder & Full-Stack Developer, Zenstack Solutions

WHO WE ARE

About Zenstack Solutions

We started Zenstack Solutions because too many good ideas were being lost to slow, bloated agencies. We keep the team small and hands-on, so every project gets real engineering attention instead of a handoff to junior contractors. We design and build websites, mobile apps, and SaaS platforms for businesses that need it done right the first time — no account managers, no junior handoffs, no vanishing after launch.

Mission, Process & Why It Works

01 • Mission Help founders and operators turn a real problem into working software, fast.	02 • Process Fixed-scope sprints with regular check-ins, so there are no surprises at delivery.
03 • Why work with us We write documented, maintainable code — and we stick around after launch.	04 • Team size Two senior developers covering both the MERN and PHP/Laravel/Django stacks.

RELIABILITY

Why Clients Trust Us

Before a client ever sees a line of code, they need to know the basics are covered. These are the standards every Zenstack Solutions engagement is held to, without exception.

Fast Response A real reply within 24 hours, not a ticket number.	Secure Development OWASP-aligned practices on every build, by default.
NDA Friendly Signed before we see a single detail of your project.	Modern Tech Stack Production-proven frameworks, not this month's trend.
International Support Clients across India, Australia, the UK & Singapore.	Direct Developer Access You work with the people writing your code — no account managers.

Built For Teams Who Can't Afford To Slip

Built for Speed Every build ships with a performance budget, not just a promise.	Found on Google Structured data, clean markup, and technical SEO from day one.
Security You Can Trust OWASP-aligned practices and encrypted data protect your business.	Built to Grow Architecture designed to handle 10x more users without a costly rebuild.
Proven, Not Experimental We build on production-tested frameworks, not trending ones.	AI Where It Actually Helps AI tooling used internally, but every line is human-reviewed and tested.

METHODOLOGY

How We Work — Our 7-Step Process

No black-box month where you don't hear from us. You'll know exactly what stage your project is in, every week.

1. Discovery	We map your goals, users, and constraints before writing a line of code.
2. Planning	Scope, timeline, and milestones defined in writing, so there's no ambiguity later.
3. UI/UX	Wireframes through to a polished, click-through UI kit you approve before build starts.
4. Development	Build sprints with a working demo every week — never a black box for a month straight.
5. Testing	Cross-device and cross-browser QA before anything reaches your users.
6. Launch	A zero-downtime release, so launch day doesn't mean downtime for your customers.
7. Support	Monitoring, patches, and iteration after launch — covered in every project by default.

CAPABILITIES

Our Services

From your first landing page to a multi-tenant platform — we design, engineer, and ship the whole product, then stick around to support it.

Website Development A site that loads fast and ranks — because a beautiful site nobody finds doesn't grow your business.	Custom Web Apps When off-the-shelf software forces your workflow to bend, we build the tool that fits how you actually work.
Mobile Apps A native-feel iOS & Android app from one well-tested codebase, so you're not maintaining two products.	UI/UX Design Interfaces grounded in how your users actually behave, not in what looks good in a portfolio shot.
E-Commerce Every extra step in checkout costs sales. We build storefronts that get customers from cart to paid, fast.	SaaS Development Billing, auth, and multi-tenancy built in from day one, so you're not re-architecting six months in.
AI-Powered Development Copilots, automation, and intelligent search — added where they save real time, not for a pitch deck.	API & Integrations Documented, tested APIs and third-party integrations, so your systems talk to each other.
Maintenance & Support Uptime monitoring, security patches, and small feature work — included by default, not upsold.	

ENGINEERING

Technology Stack

We standardize on two complete, production-proven stacks so every project is built on tools we know deeply — not whatever is trending that month.

Frontend & Frameworks

Next.js	React.js	Tailwind CSS	Bootstrap 5	EJS
---------	----------	--------------	-------------	-----

Backend

Node.js	Express.js	Laravel	Django	CodeIgniter 4	PHP
---------	------------	---------	--------	---------------	-----

Data, Infrastructure & Integrations

MongoDB	MySQL	Redis	Docker
Kubernetes	AWS	OpenAI	Stripe

Every deployment ships with CI/CD where the project calls for it, so releases happen without downtime — not as a nice-to-have, but as the default.

DOMAIN EXPERIENCE

Industries We Serve

Not theoretical case studies — systems we designed, built, and shipped for real client requirements.

Healthcare Appointment booking, patient intake, and privacy-aware data handling.	Construction Project tracking, quoting, and client-facing portals for contractors.
Real Estate Listing sites, virtual tours, and lead-capture built to convert browsers.	Removalists Booking, quoting, and lead-capture sites built to convert local search traffic.
Education Course platforms, student portals, and admin dashboards for schools.	SaaS Real-time messaging, billing, and multi-tenant platforms that scale.

PROOF OF WORK

Featured Case Studies

HRMS Pro — HR Tech, SaaS

Problem

An HR team was running employee records, leave, and payroll data across disconnected spreadsheets, with no audit trail when numbers didn't match.

Solution

A full-stack HR Management System with one system of record for employee data, leave workflows, and payroll, deployed with Docker, Kubernetes and CI/CD for zero-downtime releases.

Tech: Node.js, Express.js, EJS, MySQL, Docker, Kubernetes

Results: Payroll reconciliation cut from days to hours; zero-downtime deploys; full audit trail on every change.

WhatsApp Broadcast Pro — Messaging, SaaS

Problem

A business sending high-volume WhatsApp campaigns had no real-time visibility into delivery status — failures only surfaced hours later.

Solution

A bulk-messaging dashboard backed by Redis-driven workers and WebSockets, updating campaign, contact, and message status live on screen.

Tech: Node.js, WebSockets, Redis, MongoDB, React.js

Results: Delivery status visible in real time; reliable handling of high-volume send queues.

ConceiveLife — Healthcare

Problem

A fertility clinic took every booking by phone, costing staff hours a day and missing appointments outside office hours.

Solution

Online appointment booking with patient authentication and an admin dashboard clinic staff actually use, built on CodeIgniter 4.

Tech: CodeIgniter 4, PHP, MySQL

Results: Bookings now possible outside office hours; dashboard adopted by non-technical staff.

Additional shipped work includes Removalistnearthme.au (React.js/Tailwind, Australia), Deep Vincy World (Laravel QR loyalty platform), and Precious Fertility (CodeIgniter 4 booking + custom CMS). Full write-ups for every project are available at zenstacksolutions.com/work.

CLIENT FEEDBACK

Client Testimonials

"We went from spreadsheets to a full HR platform without a single missed deadline. The team explained every decision in plain language."

Arjun Mehta — Founder, HRMS Pro · India

"Our booking form conversions noticeably improved within weeks of launch. Communication across the time difference was never an issue."

Sarah Whitfield — Operations Director, Removalistnearme.au · Australia

"Zenstack walked us through exactly how appointment data was handled and delivered a dashboard our staff picked up in a day."

Michael Osei — Clinic Director, ConceiveLife · United Kingdom

INVESTMENT

Pricing & Engagement Models

Fixed-scope packages with no surprises. Need something custom? Just ask.

Basic	Professional	Enterprise
\$249 / project	\$699 / project	Custom
1–3 page website Responsive design Basic SEO setup Contact form 1 revision round 7-day delivery	Up to 10 pages Custom UI/UX design Advanced SEO CMS integration 3 revision rounds Priority support	Web + mobile app Custom backend & API Dedicated 2-dev team Unlimited revisions SLA-backed maintenance 24-hr priority response

No hidden fees	Secure payment	Money-back guarantee	Fixed scope, in writing
----------------	----------------	----------------------	-------------------------

Money-back guarantee: if we haven't delivered the agreed first milestone by the date in your contract, you get a full refund on that milestone — no argument. It doesn't cover scope added after work starts.

TRUST & COMPLIANCE

Security, NDAs & Data Handling

Client data — code, business plans, and end-user information alike — is handled under the same discipline we'd want applied to our own.

NDA on Every Project A mutual NDA is signed before we discuss any specifics of your project or business.	OWASP-Aligned Practices Security reviews follow OWASP guidance as a baseline on every build, not just on request.
Encrypted Data Handling Sensitive data — credentials, patient records, payment details — is encrypted in transit and at rest.	Access Control Role-based access on every system we build, so users only see what they're meant to.
Documented Handover Source code, architecture notes, and credentials are handed over in full at project close.	No Subcontracting Your project is built by Anuj and Sumit directly — never handed off to outside contractors.

THE PEOPLE

Meet the Team

A small, hands-on dev team that ships with clarity — you work with the people actually writing your code.

Anuj Bishnoi

Founder & Full-Stack Developer
React.js · Node.js · Express.js · MySQL

Sumit Saini

Full-Stack Web Developer
Laravel · Django · CodeIgniter 4 · PHP

What Sets Us Apart

6 Live Projects

Real client & production platforms shipped, not mockups.

Direct Access

You work with the actual developers, no account managers.

Two Full Stacks

React/Node/Express and Laravel/Django/CodeIgniter covered.

Hands-On Support

Small team means fast replies, not ticket queues.

THE DIFFERENCE

Why Work With Us

	Typical Agency	Freelancer	Zenstack Solutions
Who writes your code	Junior contractors	One person, variable skill	Two senior developers, direct
Response time	Days, via account manager	Inconsistent	24 hours, guaranteed
Stack coverage	Varies by staffing	Single stack only	MERN + PHP/Laravel/Django
Post-launch support	Often a paid upsell	Often unavailable	Included by default
Pricing	Opaque, scope creep	Informal, risky	Fixed scope, in writing

NEXT STEPS

Get In Touch

Send your project details and we'll reply within 24 hours with a realistic scope, timeline, and quote — no sales call required to get that.
